Upcoming Information Sessions:

Plum Island and Sea Level Rise

What should Newbury and Newburyport be aware of related to Plum Island and sea level rise?

What do current sea level rise predictions show when matched to the island, and what might some of the fiscal impacts be for the towns?

Both towns identified these important questions in their climate resilience planning in 2019. A project funded by the state's Municipal Vulnerability Program sought to find some early answers.

Join us (virtually) for two sessions in May and June to hear our findings and provide your thoughts to the towns about what other information they will need to make good decisions in the future.
