Based on my evaluation for your property, I have customized the following recommendations to help you achieve your landscape goals. If you have any questions or concern, feel free to contact me.

#	Item	Description	
1	Ash (White)	<p>Winter - Tree Removal</p> <p>Tree dismantled using latest low impact techniques and equipment. All wood and debris removed. Stumps cut to within 6" of ground. All work Performed to ANSI Z133 Standards for safety. A variety of techniques can be used to remove trees without damaging the existing landscape.</p> <p>Front, Ash (25" dbh)- Take down, remove and cut the stump low.</p> <p>* This tree is showing signs of crown dieback and is in a state of decline. There is a major cavity on the trunk with decay fruiting bodies and the trunk is sounding hollow when tested by a rubber mallet. With multiple signs of structural defects and given the location of the tree, I would consider this tree potentially hazardous and should be removed to avoid property damage and or personal injury.</p>	<b>\$2,250.00</b>
2		<p>Winter - Stump Grinding - Debris Left Onsite</p> <p>Mechanical grinding of the visible tree stump to ground level. Stump hole will be back filled with stump grindings and excess grindings left onsite. Surface and subsurface roots beyond the stump are not removed unless specified in this proposal.</p> <p>STUMP GRINDING MAY NOT BE COMPLETED THE SAME DAY AS THE TREE REMOVAL This is performed by a separate crew at a later date. Dig-Safe may have to be contacted to mark underground utilities This is a free service arranged by Seacoast Tree Care.</p>	<b>\$150.00</b>
3		<p>Winter - Log Removal</p>	<b>\$300.00</b>
